Project Goals

Queue reduction, better user experience

online booking, live crowd updates, safety improvement

Who will participate?

Student developers

backend developer, frontend developer,

temple administration devotees

How would we measure success?

Reduced waiting time, successful bookings

system reliability, user satisfaction

Cost

Low development cost, cloud hosting cost

API usage cost, maintenance effort

What are we missing?

Real temple data, live crowd dataset

user testing, cloud resources

Action Items

UI design, backend development

database setup, booking system

QR integration, AI features,

testing, deployment

What do we have?

Project idea development tools

programming skills, planned architecture, technology stack

Potential Obstacles

Data availability, internet dependency

scalability issues, user adoption, deployment challenges
